

Reliability, transparency, and security: these are some of the main benefits of blockchain technology. Find out how you can leverage blockchain technology in your daily operations.

Governments on the Blockchain

by Blockchain Foundry Inc.

Business licenses are important in today's world. Blockchain technology can provide a simple solution to issuing, validating, and maintaining data for these licenses.

Business Licenses on the Blockchain

Business Licensing Authority

To begin you will create a Business Licensing Authority, who can validate and approve licenses or delegate this to other users, called "Business Licensing Agents".

Business Licensing Agents

Individuals seeking a business license can apply through the business licensing web portal which is maintained by the Agents.

Validating Documentation

Once submitted, the Business Licensing Agent will validate the documents and begin processing the application.

Store blockchain-verified documents

The Business Licensing Agent stores the documents and processed application through a Hybrid Blockchain System.

Business Licensing Agent issues Business License

Once the documents are validated and stored, the Business Licensing Agent issues the Business License.

Blockchain Technology & You

Blockchain technology is known for its many benefits. Due to proven encryption processes and a method called "decentralized consensus", blockchains are extremely hack-resistant. Each blockchain ledger consists of a set amount of easily tracked data "anchors"; this imbues your systems with transparency, easy validation, accountability, and fraud prevention. Thanks to built-in redundancy from decentralization, your systems are guaranteed 100% up-time.

Blockchain Foundry has the Experience

At Blockchain Foundry, we use Hybrid Blockchain Technology (HBT), this technology maintains scalability of your network, and works by time-stamping and "anchoring" your data stored off-chain to the blockchain ledger. Each ledger consists of a set amount of data "anchors" stored in a decentralized fashion. We use this process in our Blockmarket Suite. Blockmarket uses "Aliases" as a way to allow our users to create their own digital identity on the blockchain.

Blockchain Foundry can help you implement your blockchain ecosystem visions. We provide custom blockchain development, consulting, and integration solutions that will allow you to leverage blockchain technologies into your government use cases. Blockchain Foundry is here to help you build your best future. Contact us to learn more.
